

My Machine Won't Open Links To Files In Google Chrome

This problem occurs due to clash between Chrome and your Internet Security software installed in your computer like Kaspersky IS Norton 360, etc.

The solution is very simple... Go to

1. Google Chrome Settings >>
2. Options >>
3. Under The Hood >>

Uncheck the checkbox for "Enable phishing and malware protection". This will put a stop to the conflict, and you should now be able to open links to files in Google Chrome.

Enjoy.

A handwritten signature in black ink that reads "Dev. Fung". The signature is written in a cursive, slightly slanted style.
