

How To Move The Cursor To The End Of The Textbox

In this example, we will be referring to a textbox known as "Text1". All references to a textbox in this programming example will directly refer to "Text1".

Start with this public sub...

```
Public Sub MoveCursorToEnd(txt as Textbox)  
  With txt  
    .SetFocus  
    .SelStart = Len(txt.Text)  
    .SelLength=0  
  End With  
  SendKeys "{END}"  
End Sub
```

Then assuming your textbox is called "Text1" (as previously specified) you should then be able to call this sub as such...

```
Call MoveCursorToEnd(Text1)
```
